

## *Dear residents!*

During Christmas time we generate even more waste and most of it can be recycled. Below you will find some useful tips on how to reduce waste and recycle more. **THANK YOU FOR RECYCLING ALSO DURING CHRISTMAS TIME!**

- Put **ham grease** in a tight container and then to the mixed waste inlet. Grease should not be poured down the sink or into the toilet, because it can clog the pipes.
- **Food waste** belongs to the biowaste inlet, not in the toilet.
- Dispose of **stearin, candle remnants, and glass candle holders** in mixed waste.
- Place the **chocolate box** in cardboard recycling, **plastic wrappers** and the **plastic tray** in plastic packaging recycling. **Aluminum wrappers** that stay crumpled when squeezed should be sorted into metal recycling.
- **Wrapping paper** is mixed waste. It does not qualify as paper or cardboard for recycling purposes.
- **Aluminum foils** and **tea light candle shells** belong to the metal section of the recycling room.
- **Broken LED candles and light sets** belong to electrical waste collection
- **New Year's lead tin** is hazardous waste. Tin is collected free of charge in HSY hazardous waste containers and Sortti-stations, or you can use it again next new year.
- **Flatten cardboard** boxes before placing them in the trolley (in the Recycling room).

**Old Christmas trees** will be collected 1-2 times per week **during January**. Check details [www.rode.fi/en/news](http://www.rode.fi/en/news)

Waste bins will not be emptied on Christmas, so collections may happen a day earlier or later than usual, including on weekends. Keep packaging waste at home for a while if the bins are full!
